PDF AI Assistant – Installation & Setup Guide

System Requirements

Before running the project, install the following software:

1. Python (Version 3.10 or 3.11)
   https://www.python.org/downloads/
   ✔ أثناء installation, enable **"Add Python to PATH"**
2. Node.js (Version 18 or higher)
   https://nodejs.org/

Project Structure

After extracting the .rar file:

```
project/
├── Backend/
├── Frontend/
└── README.txt
```

Backend Setup

Step 1: Open Terminal in Backend Folder

```
cd Backend
```

Step 2: Create Virtual Environment

```
python -m venv venv
```

Step 3: Activate Virtual Environment

For Windows:
```
venv\Scripts\activate
```

Step 4: Install Dependencies

```
pip install -r requirements.txt
```

Step 6: Run Backend Server

```
uvicorn app.main:app --reload
```

Backend will run at:
http://127.0.0.1:8000

□ Frontend Setup

Step 1: Open Terminal in Frontend Folder

cd Frontend

Step 2: Install Dependencies

npm install

Step 3: Run Frontend

npm run dev

Frontend will run at:
http://localhost:5173

□ How to Use the Application

1. Open browser and go to:
   http://localhost:5173
2. Register/Login
3. Create a new session
4. Upload a PDF file
5. Ask questions based on the uploaded file

□ Troubleshooting

Issue: MongoDB not connected

✔ Check MONGO_URI in `.env` file

Issue: "No relevant documents found"

✔ Upload the file again
✔ Ensure file processing is complete

Issue: Port already in use

Press:
CTRL + C
Then run the server again

Issue: Python not recognized

✔ Reinstall Python and enable "Add to PATH"

 Important Notes

- Always run Backend before Frontend
- Do not close Backend terminal while using the app
- Internet is required for AI responses (Google API)

 Project Ready

Once both Backend and Frontend are running, the system is ready to use.
